

VE1545

PROFILE SUMMARY

Senior Full-Stack .NET Engineer with 9+ years of experience designing and developing enterprise-grade web applications using ASP.NET Core, Blazor Server, REST APIs, Angular, and SQL Server. Strong expertise in scalable application architecture, reusable component development, clean coding practices, and database performance optimization.

Experienced in building modular and maintainable systems using ASP.NET Core 6/8, Blazor Server, SQL Server stored procedures, Entity Framework Core, and RESTful services. Skilled in enterprise application delivery, role-based security implementation, IIS deployment, CI/CD pipelines, and collaborative Agile development environments.

Hands-on experience working with enterprise workflows, layered architecture, API integrations, SQL query optimization, and production support in large-scale business applications.

TECHNICAL SKILLS

Languages & Frameworks: C#, ASP.NET Core 5/6/7/8, ASP.NET MVC, .NET Framework, Blazor Server, LINQ, Razor Components

Backend Development: REST API / Web API Development, Minimal APIs, Entity Framework / EF Core, ADO.NET, Dapper (Basic Knowledge), Dependency Injection, Repository Pattern, Clean Architecture, SOLID Principles

Frontend Technologies: Angular 9/10/12/18, TypeScript 5.x, JavaScript, jQuery, HTML5, CSS3, Bootstrap, Tailwind CSS, NgRx (Store, Effects, Router Store)

Database & SQL: SQL Server, MySQL, Stored Procedures, SQL Query Optimization, Functions & Triggers, Performance Tuning, Indexing Concepts, Transaction Handling

Authentication & Security: JWT Authentication, Role-Based Authorization, SSO, Secure API Development

DevOps & Tools: Azure DevOps, GitHub, CI/CD Pipelines, IIS Hosting, MS Azure, WCF Services

Architecture & Development Practices: Layered Architecture, Reusable Component Development, Enterprise Application Development, Production Support, Agile/Scrum Methodology

WORK EXPERIENCE

- Developed and maintained enterprise web applications and RESTful APIs using ASP.NET Core and Angular.
- Built scalable frontend applications using Angular, TypeScript, and NgRx state management.
- Developed reusable UI components and modular enterprise workflows.
- Implemented role-based authentication, secure APIs, and application authorization.
- Worked on SQL Server stored procedures, query optimization, indexing concepts, and database performance tuning.
- Participated in Agile development, requirement analysis, production support, and IIS deployment.

CURRENT PROJECTS

Swisslog Healthcare System (Frontend + Backend)

Role: Technical Lead

Tech Stack: Angular 18, TypeScript 5.5, ASP.NET Core Web API, SQL Server, Entity Framework

- Interacted with clients for requirement collection and estimation.
- Developed enterprise modules using ASP.NET Core and Angular.
- Optimized SQL queries, procedures, and functions for better performance.
- Worked on scalable enterprise workflows and modular application design.

Mobile Service EMEA (Frontend + Backend)

Role: Senior Software Engineer

Tech Stack: Blazor Server, ASP.NET Core, SQL Server, WCF

- Developed enterprise-level modules using Blazor Server and ASP.NET Core.
- Built reusable Razor components and implemented two-way data binding.
- Designed and maintained SQL Server stored procedures and optimized queries.
- Implemented role-based access control and secure data handling.
-

Management OGSM (Frontend + Backend)

Role: Software Engineer

Tech Stack: Blazor Server, ASP.NET Core, SQL Server, REST API, SSO Authentication

Responsibilities:

- Developed enterprise OGSM (Objectives, Goals, Strategies, Measurements) management modules using Blazor Server and ASP.NET Core.
- Implemented role-based access control for Super Admin, Module Admin, OGSM Owners, Customers, and Vendors.
- Designed onboarding workflows for internal AD/SSO users with automatic onboarding functionality based on assigned OGSM ownership.
- Developed permission management features allowing OGSM Owners to manage and update assigned Objectives and Goals with read/write access.
- Built secure authentication and authorization workflows using SSO and MFA-based login mechanisms.
- Worked on Customer Portal and Vendor Portal modules with separate access control and onboarding processes.
- Integrated enterprise workflow logic for objective assignment, ownership management, and permission-based data visibility.
- Developed reusable Blazor components and maintained separation of business logic from UI components using service-based architecture.
- Collaborated with business stakeholders to implement module-level administration and user permission management workflows.
- Designed SQL database objects, optimized queries, and maintained scalable backend integration workflows.

Support Request Workflow (Frontend + Backend)

Role: Software Engineer

Tech Stack: Angular 9, Web API, SQL Server

- Developed ticketing and workflow management modules.

i-Agritrack (Frontend + Backend)

Role: Junior Software Engineer

Tech Stack: ASP.NET MVC, JavaScript, SQL Server, ADO.NET

Responsibilities:

- Worked on a farming management application designed to manage end-to-end agricultural operations.

- Developed modules related to seeding, growing, harvesting, cutting, crop tracking, and farm activity management.
- Contributed to frontend and backend development using ASP.NET MVC, JavaScript, and SQL Server.
- Developed database-driven functionalities using ADO.NET and SQL Server queries.
- Assisted in creating admin panel features for managing user settings, workflow configurations, and UI customization.
- Participated in bug fixing, requirement analysis, and application enhancement activities as part of the development team.
- Gained hands-on experience in enterprise application development, database management, and client requirement implementation during the initial phase of career development.

ADDITIONAL EXPERIENCE

- Experience working on enterprise-grade applications with modular and scalable architecture.
- Strong understanding of clean coding practices and maintainable application design.
- Familiar with architecture-driven development and collaborative Agile workflows.
- Experience in IIS deployment, debugging, and production issue resolution.
- Comfortable working in structured development environments with coding standards and review processes.

EDUCATION

B.E. (Information Technology) – P.I.E.T. Nagpur
